

# *A Water Monetary Standard*

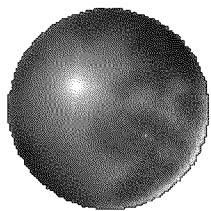

## **An Economic Thesis**

By

Michael Jackson

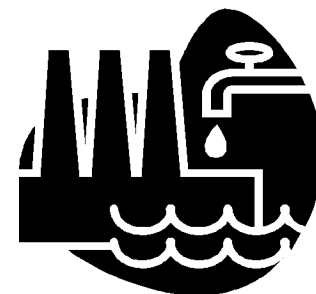

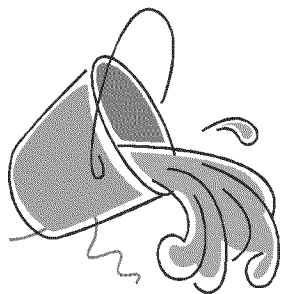

Annapolis, Maryland, USA

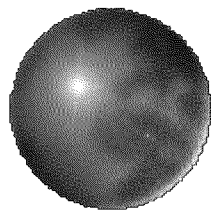

**Ex. 6 - Personal Privacy**

## *The Current Problem*

$X+Y = -W$  where:  $x$  and  $y$  are water production/maintenance costs and  $w$  is the total debt to produce water; is mathematically incorrect.

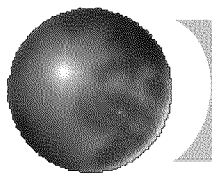

*The New Paradigm:*

*When  $x+y= \text{water}$*

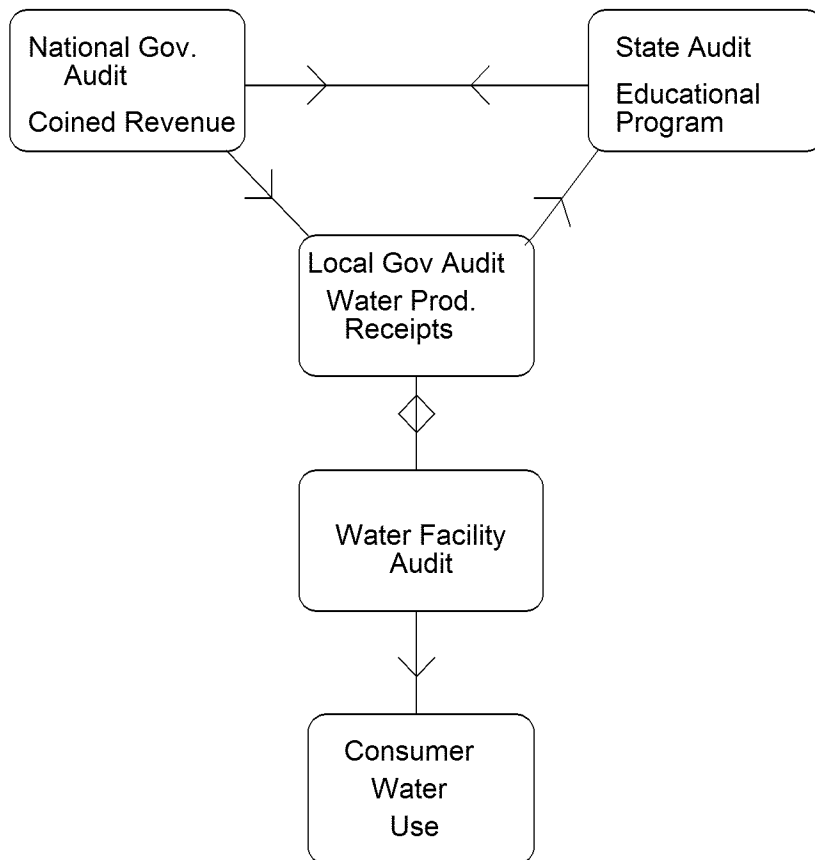

*Then  $x+y= |w|$*

Water has a scientifically demonstrable absolute value. A positive integer.

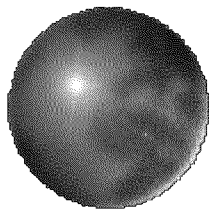

It is applicable through rules of sovereignty and economics.

# *Enabling Growth & Free Enterprise*

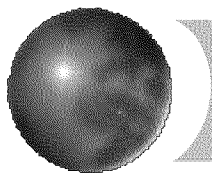

- GNP will now have a minimum value of  $x+y=|w|$ . This value is the result of the complete distribution process.
- $|w|$  produces coined money which trickles out locally and is compounded upon by free enterprise.

## *Local Economic Independence*

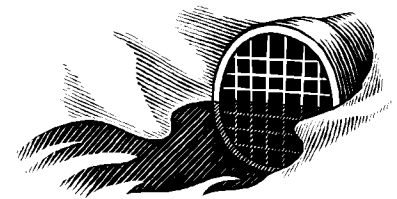

This policy will sever local economic dependence upon stock market vagaries while providing a local foundation for market growth.

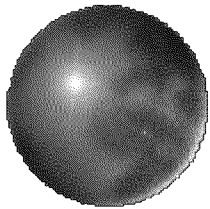

# *Community Stabilization.*

- **Water Service Benefits.**
- Increased Maintenance and Service.
- Desalination, no longer cost prohibitive.
- Cleaner water no longer a profit loss.
- Cleaner Healthier Citizens
- **Waste Water Services.**
- Expanded Service and maintenance.
- Increase in environmental Health
- Land Reclamation of desertification through reuse of sludge and water for fertilizer.
- **Trash Recycling**
- More Electricity or Raw Materials
- Healthier Communities

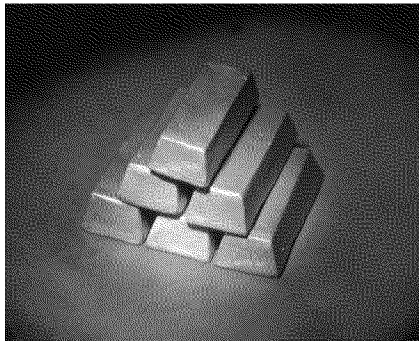

# *Economic Affect*

Use of this policy as an International Bank Loan Requirement will increase the likelihood of repayment. The policy will assist in achieving UN Millennium Goals.

- Household costs lowered through the removal of User fee
- Local economy boosted by influx of monies through the local infrastructure labor and supply market increases tax base.
- Regional tax revenues increase as local tax structure stabilizes
- National tax revenue increase results in bank payoff
- Nations become economically stable

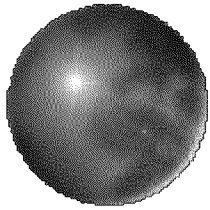

## *Fighting Urban Poverty*

Instituting an absolute value will increase access, quality and quantity of water and waste water services. This combination can drastically change the health index of a community; leading to

- Lower Mortality Rate
- Lower Tax Expenditures on Mortality related problems.
- Higher Labor Production
- Sharper Thinking

# *Ideology*

Ideology has kept this solution from emerging. The U.S. Declaration holds that “we are endowed with certain unalienable rights” entitled by the laws of Nature and Nature’s God”. Money is in itself unnatural. A water user fee is just such a violation. It leads to indignation, entitlement water use, and conflict.

Unfettered access will lead to a natural instinctive use of water. Coupled with education; water conservation will become second nature through nature and nature’s God.
